

PROBLEM STATEMENT

The Crisis of Resume Inflation & Curriculum

THE CORE
PARADOX

Students claim skills they don't have. Recruiters spend **42 hours** per hire, manually parsing unverified resumes, what industry needs **until companies stop coming**.

01 - FOR STUDENTS

The Rejection Blackbox

- 78%** of student resumes carry exaggerated or generic claims — "React: Advanced", "Python: Expert".
- 0** actionable feedback on rejection. Students never learn **which specific concept** disqualified them.
- ∅** Unverified MOOC certificates carry zero signal for an engineering manager.

02 - FOR RECRUITERS

Screening Paralysis

- 42h** of engineering time burned per hire, manually parsing unverified resumes.
- 86%** rise in AI-generated, keyword-saturated CVs overwhelming ATS filters (LinkedIn, 2026).
- CGPA** and college prestige used as crutch proxies — missing top-tier tier-1 builders entirely.
